More Dollars Actually Spent In Classrooms:

Our school boards and district administrators have direct management and responsibility for Utah's schools. The most efficient school districts in the US only place about \$0.65 of every \$1.00 into actually educating our children. A 35% overhead is extremely high in any business operation; we must not forget that our schools are in the business of educating our children.

An increase in efficiency of only 1% would free over \$22, 488,944 for use in the Utah classrooms. Surely our school district officials can find a 1% increase in efficiency and put 22 million dollars back into the classrooms.

As your state representative, I will work to hold schools district administrators accountable to use state funding in the classroom, and to lower administrative overhead and other non-instructional costs.

I will not talk the talk as others have done. I'll walk the walk without listening to, or making, excuses. Do our children and our state's future deserve any less? It's time to get this job done.

My name is Jay Brummett and I ask for your vote.
Call me at: 573-5776
